Emergency Action Planning – High Angle Rescue

WHY IT'S IMPORTANT

Grain bin high angle rescue is a crucial element of your Emergency Action Plan. Preparing to act safely, quickly, and efficiently to transport an incident victim to the ground for medical care is critical.

When every second counts, you need a tried and true plan of action to ensure the safety and health of your employees. This workshop will cover the following topics/sessions:

- **Emergency Action Planning / Rescue Capability Evaluations - Jeff Funke, OSHA**
Mr. Funke, the area director of the Omaha Area Office of OSHA, will explain the importance and regulatory requirements under 29 CFR 1910.272 for establishing and implementing an Emergency Action Plan. Employers must ensure that they have the proper equipment and rescue capabilities to perform grain bin rescue specific to the bin being entered.
- **The Day My Rescue Training Helped Save a Man Buried in Grain - Jeff Krebs, CVA**
Jeff Krebs, a member of Central Valley Ag's rope rescue team, will share his remarkable story of the day his training was called into action. He received a call from the local fire department asking for assistance in saving a farmer buried in a grain bin.
- **Rescue Equipment Considerations - Pat Furr, Roco Rescue**
Pat will provide information about the history of rescue equipment and explain why choosing the right equipment is important.
- **Building an Internal Rescue Team: Key Steps and Considerations - CVA**
Central Valley Ag Cooperative has trained and equipped 5 rope rescue teams to perform high angle and grain bin rescues. They will share what drove their decision to develop internal rescue capabilities, the steps involved, and some of the key considerations along the way.
- **Onsite Demonstration of Rope Rescue Teams - CPI, Fairmont, Nebraska**
